OneCLICK

From flight to cost estimation
in one click

The Professional Solution for Roof and Façade Inspection and Measurement

The OneCLICK solution with the Anafi Work Drone allows to scan Roofs and Façades saving time and resources while ensuring operator safety. The real advantages of OneCLICK derive from the data analysis tools acquired with Drones which allow the user to detect damage caused by weather, for example, and to calculate cost estimation for maintenance and repairs.

A seamless workflow from inspection, to problem identification and cost estimation. Efficient inspections, immediate checks, surveys on roofs and façades are just some of the aspects related to the use of OneCLICK.
